

HTML Basics — Quick Reference

Mustey Digital Academy — Web Development Fundamentals

Basic Page Structure

```
<!DOCTYPE html>
<html>
<head>
  <title>My Page</title>
</head>
<body>
  <h1>Hello, World!</h1>
</body>
</html>
```

Common Tags

- **<h1> to <h6>** — Headings, largest to smallest
- **<p>** — Paragraph of text
- **** — Hyperlink to another page
- **** — Embed an image
- ** / ** — Unordered / ordered list
- **** — A list item
- **<div>** — Generic block container
- **** — Generic inline container

Key Concepts

- HTML defines **structure**, not appearance — that's CSS's job.
- Tags usually come in pairs: an opening tag and a closing tag (e.g. <p>...</p>).
- Some tags are self-closing, like and
.
- Attributes add extra info to a tag, e.g. href in .

Practice Exercise

Create a file called practice.html and build a simple personal profile page using:

1. A heading with your name
2. A paragraph describing yourself
3. A list of 3 skills you want to learn
4. A link to your favorite website
